DETAILED ACTION

Terminal Disclaimer

1. The terminal disclaimer filed on filed September 23, 2005 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of any patent granted on serial number 10/802,160 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

2. Claim 1-9, 11-14 and 16-22 are allowed over the prior art of record.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: The primary reasons for allowance are applicants' filing of a Terminal Disclaimer disclaiming the terminal portion of any patent granted on copending application 10/802,160, and applicants' arguments over the rejections made over the Cullen reference in their response filed August 16, 2005. While the Cullen reference (US 3,763,158) teaches that high ratio alumina rich spinel crystals have been attempted to be made by known CZ methods, no successful single crystal spinels were ever manufactured. The reference specifically discloses that resultant crystals were multi-phasic and that the formed non-stoichiometric crystals all had two lattice constant values (e.g. polycrystalline and not single crystal as claimed). Other prior art of record, such as Wang (US 3,658,586) teaches a substrate made of a single crystal magnesium aluminate spinel having a composition $\text{MgO} : x\text{Al}_2\text{O}_3$ wherein $x = 1.5$ to 2.5 . The Wang reference fails to teach or suggest the b:a ratio (Mg:Al) is > 2.5 as claimed by applicants.
